## Official presentation of Banana Accounting 7

05.12.2012

Banana.ch SA  is officially presenting the Banana Accounting 7 software, thanks to which doing the accounting has never been this fast and easy.

The strong points of Banana 7 are: the even more improved interface, entering the accounting transactions is now even faster, and the ability to create more detailed prints and reports.

And, what's more,  the most awaited novelty for the Apple users is the native version for Mac (that no longer requires the Crossover emulator)

**Banana Accounting 7 already passed the test**

Banana Accounting 7 has been tested by numerous users and has been for sale on the market since the month of October 2012.

Banana 7 showed itself highly stable, efficient and is greatly appreciated. During these last months we have also corrected a few minor issues and added some improvements, resulting in the release of version 7.0.2 at the end of December 2012.

Considering the positive outcome, we now feel confident to officially present the new version and we highly recommend our users the purchase of Banana Accounting 7.

**Numerous improvements**

- Version 7 is very similar to version 6, however, various improvements have been included that facilitate and accelerate the work even more (see also [What's new in version 7](#))
- Renewed graphic interface, modern and pleasant.
- Possibility to edit directly in the cells.
- Several improvements for the Balance Sheet reports and the Profit and Loss Statement.
- Swiss VAT; printout of VAT report directly from the program, both for the VAT with the effective method as well as for the Flat tax rate method.
- Importing transactions from the ISO 20022 format; different other filters have been updated and improved.
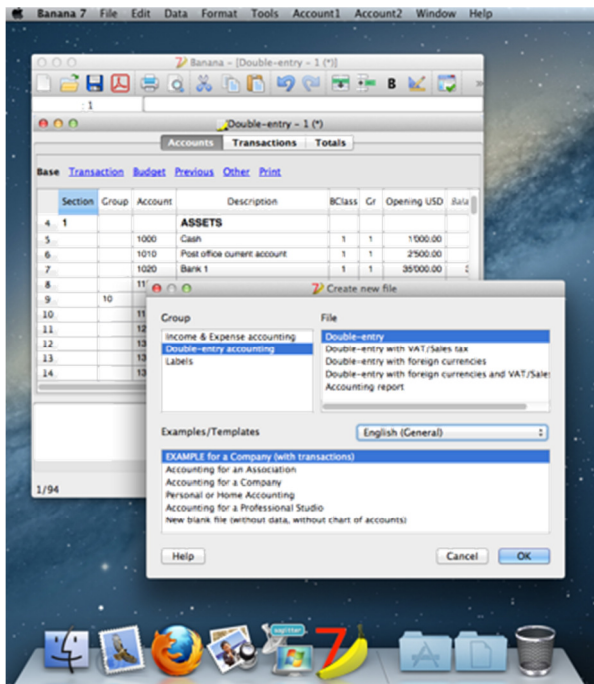

**Mac version**

Starting with version 7, Banana Accounting is now available in a Native Mac version.

**Compatible with versions 5 and 6**

Banana 7 is compatible with the earlier versions 5 and 6. Files saved with version 7 can also be read and edited with version 5 and 6.

The look and feel is familiar, and the commands have remained substantially identical to those in previous versions.

When updating to version 7, the user is immediately at ease, without having to learn anything new.

Please take a close look at this page when Updating to version 7.

**Special Update prices**

Registered users of a preceding Banana Accounting version can purchase version 7 at a preferential price (go to the Purchase page)

**Starter edition**

You can [download and install Banana Accounting 7](#). You will then have the possibility to work in the Starter Edition mode. You can try all of its functions, except saving files with more than 70 transactions. If you are satisfied, you can send your order and receive a license key that once entered in the program, will allow you to operate in the complete mode.

## Free license for schools

14.02.2012

In order to promote the use of accounting software as a tool for teaching accounting, the company Banana.ch SA has decided to offer, **at no cost**, a complete and unlimited multi-license to all recognized public schools or schools officially acknowledged as such. The multi-license enables the school to install and use Banana Accounting on all its computers that are intended for educational use. In order to benefit from this offer, please complete the [online form](#), and accept the conditions for schools.

For more information please visit the [Free license for schools](#) page.
